# Dynamic Application Management and Delivery.

appCURE

The capture, transform and delivery solution for application migration for a faster, more secure digital workspace

Your organisation depends on your business-critical applications and needs to ensure they are available, secure and keep pace with the speed of your organisation.

appCURE is the only solution which enables you to capture, update and transform your applications to any modern secure digital platform, be that physical, virtual or cloud. With appCURE's unique 'on disk capture' capability, there is no requirement to have install media, undertake lengthy 'clean' machine builds or deep application knowledge or skills. appCURE can automatically analyse and build your applications in place, ready for deployment in the broadest set of formats and is compatible across the widest number of platforms.

Applications tied to old operating systems and platforms, hold back your business and increase your costs, with extended support, older less agile platforms and increased security issues. appCURE enables your IT teams to quickly modernise your applications and support your digital transformation agenda, all while streamlining the migration process with a comprehensive automation tool set.

The digital transformation of your organisation is vital and a key component of this is the adoption of a digital workspace. A digital workspace enables people to work and collaborate better, be more productive and enable new more efficient work practises. However, to achieve this you need to make sure your applications are compatible with any new digital platform. appCURE enables you to quickly move your applications to your new digital workspace and manage seamlessly multiple digital workspaces, any on-going updates and deliver processes.

appCURE enhances and transforms your application life cycle management and delivery capabilities. appCURE delivers a comprehensive set of pre-built and tested automation tools which quickly enable you to support the widest number of platforms and formats. Speed up your deployment and delivery processes and improve how you manage your applications.

appCURE at a glance

Capture desktop (98, VISTA, XP, W7) or server (2000, 2003, 2008, 2012, 2016) applications.

Automation tools for
- Capture
- Management
- Delivery
- Security

"appCURE enables the rapid capture and transformation of business applications, ready to be delivered on Windows Virtual Desktops, reducing timescales and increasing adoption"

Kim VedBrat
Partner Group
Program Manager
Microsoft

appCURE modernise your application delivery

Capture application installs from existing old platforms and automatically transform ready to deploy to new platforms

Update your captured or any existing application package to your desired format, ie MSI, MSIX etc ready for immediate deployment to your new platform

Execute your new transformed app or covert into your preferred delivery format ready for physical, virtual or cloud consumption.

Benefits of using appCURE

Speed

Use appCURE to quickly capture and transform your application with its unique 'capture on disk' and deliver to your new desktop platform, whether its physical, virtual or cloud in minutes. Transform with faster automatic processes and gain a faster more agile digital workspace.

Cost Savings

appCURE enables you to deliver projects quicker with less resources, automates repetitive processes and enables you to use modern lower cost resources and platforms.

Application Modernisation

Use appCURE to capture your applications from your existing systems and transform them to new modern platforms. Take advantage of modern package formats, such as MSIX which support more agile working practises.

Deliver

Capture applications with appCURE and deliver the output via standard folder structure or conversion to MSI/MSIX or other formats depending on your chosen platform..

Wide choice of formats

Adopt a fast, low resource approach to application deliver, which provides greater flexibility and the widest choice of application delivery formats and options.

Learn more about how appCURE can transform your application management.

Simple to deploy, easy to use and fast to deliver benefits to your organisation.

Call or email to see how within a day you can remove complex application update, deliver repeat processes.

"Application migration has just become simple. appCURE facilitates the rapid conversion of most applications into Microsoft's MSIX packaging and virtualisation platforms. Time and effort is reduced and it removes the complexity of application migration."
